## Experience

### Advanced Software Engineering & Development Intern

May 2026 – Jul 2026

MPOnline Limited (TCS – Govt. of MP Joint Venture), Bhopal

- Contributed to a software engineering and development internship, building and testing modules within an ISO-certified, CMMI Level 3-appraised software delivery process.
- Gained hands-on exposure to full-stack development practices, version control, and collaborative software delivery workflows in an enterprise environment.

### Data Science / Analytics Intern

Remote

Data Science Technologies, Gurugram, Haryana

- Studied trader performance against market sentiment data across 10,000+ trades, applying statistical and ML techniques to uncover behavioral correlations.
- Processed and cleaned 15,000+ records of trading and sentiment data, building a structured pipeline for comparative performance analysis.
- Translated raw sentiment signals into actionable insights, surfacing measurable behavior patterns in trader decision-making.

## Education

### Vellore Institute of Technology

Bhopal, Madhya Pradesh

Bachelor of Technology in Computer Science & Engineering, **CGPA: 9.07**

2023 – 2027

## Projects

### FuelSense AI | [GitHub-link](#) | Python, Flask, JavaScript

Apr 2026 – Aug 2026

- Developed a location-based platform surfacing 500+ fuel and EV charging stations using Python, Flask, JavaScript, Leaflet, and the Geoapify API.
- Built an interactive map ranking the top 5 stations by distance and time of day, cutting average lookup time for faster decision-making.
- Integrated OpenStreetMap and Geoapify APIs to visualize station data for 1,000+ locations, with support for AI-based scoring and traffic-density prediction.

### ADAS Steering Angle Prediction | Python, Deep Learning, Transformer Architecture

Jan 2026 – Apr 2026

- Designed an Advanced Driver Assistance System (ADAS) predicting steering angle from dashboard camera and video input, achieving 87% prediction accuracy.
- Built a decoder-based Transformer architecture inspired by the GPT-2 124M-parameter model, trained on 50,000+ frames to learn sequential driving behavior.
- Combined deep learning, computer vision, and sequence modeling, with a planned real-time extension targeting 30 FPS on live camera input.

### Trader Performance vs. Market Sentiment | Pandas, NumPy, Matplotlib, Seaborn

Dec 2025 – Feb 2026

- Investigated the relationship between 10,000+ trades and market sentiment indicators, uncovering behavioral patterns linked to trading outcomes.
- Ran data cleaning, preprocessing, EDA, and feature analysis on a dataset of 15+ features using Python, Pandas, NumPy, Matplotlib, and Seaborn.
- Compared profitability, trade frequency, and performance across sentiment conditions, finding a 12% difference in returns between high- and low-sentiment periods.

## Technical Skills

**Languages:** Java, Python, SQL, HTML

**Frameworks/Libraries:** Flask, Streamlit, TensorFlow, OpenCV

**Machine Learning:** Linear/Logistic Regression, Ridge/Lasso/ElasticNet, SVM, Naive Bayes, KNN, Decision Trees, Random Forest, AdaBoost, Gradient Boosting, XGBoost, K-Means, Hierarchical & DBSCAN Clustering, PCA, Anomaly Detection

**MLOps & Deployment:** Docker, Git, MLflow, DagsHub, BentoML, AWS, Azure

**Databases & Tools:** MongoDB, SQLite3, GitHub, VS Code, Jupyter, Anaconda

## Coding Profiles

- LeetCode** – [YShishodia](#)
- CodeForces** – [YASHRAJ.24](#) (Rating: 594)

## Achievements & Certifications

- AWS Technical Essentials** – AWS Training & Certification.
- Introduction to Machine Learning** – NPTEL, IIT Madras.
- Marketing Analytics (Elite, 90%)** – NPTEL, IIT Kharagpur.
