Phone: 8595722855 | shishodiayashraj@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Vellore Institute of Technology Bhopal, Madhya Pradesh
Bachelor of Technology in Computer Science & Engineering, CGPA: 9.07 2023 – 2027

TECHNICAL SKILLS

Programming: Python, SQL, Java, HTML
Data Science: Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA), Data Preprocessing, Feature Engineering, Statistical Analysis
Machine Learning: Scikit-learn, Regression, Classification, Decision Trees, Random Forest, SVM, KNN, Naive Bayes, Gradient Boosting, XGBoost, PCA, Clustering, Anomaly Detection
Deep Learning & AI: TensorFlow, Computer Vision, OpenCV, Transformer Architecture, Sequence Modeling
Frameworks: Flask, Streamlit
MLOps & Deployment: MLflow, DagsHub, BentoML, Docker, AWS, Azure
Coding Profiles: [LeetCode – YShishodia](#), [CodeForces – YASHRAJ_24](#) (Rating: 594)

EXPERIENCE

Data Science / Analytics Intern Remote
Data Science Technologies, Gurugram, Haryana

- Studied trader performance against market sentiment data across 10,000+ trades, applying statistical and ML techniques to uncover behavioral correlations.
- Processed and cleaned 15,000+ records of trading and sentiment data, building a structured pipeline for comparative performance analysis.
- Translated raw sentiment signals into actionable insights, surfacing measurable behavior patterns in trader decision-making.

PROJECTS

FuelSense AI Apr 2026 – Aug 2026
Tech Stack: Python, Machine Learning, Flask, Geoapify API, OpenStreetMap

- Addressed inefficient fuel/EV station selection by developing an AI-driven recommendation system to evaluate nearby stations using geospatial, distance, time-of-day, and traffic-related data.
- Engineered a Python-based data processing and scoring pipeline for 500+ fuel and EV stations, integrating Geoapify and OpenStreetMap APIs to process geospatial data across 1,000+ locations and support AI-based station scoring and traffic-density prediction.
- Automated ranking of the top 5 stations based on contextual factors, enabling faster, data-driven station selection through location-aware recommendations.

ADAS Steering Angle Prediction Jan 2026 – Apr 2026
Tech Stack: Python, TensorFlow, Deep Learning, Computer Vision, Transformers

- Developed a deep learning-based Advanced Driver Assistance System (ADAS) to predict vehicle steering angles from dashboard-camera and video sequences for autonomous driving applications.
- Designed a decoder-based Transformer architecture inspired by GPT-2 and trained it on 50,000+ video frames, combining computer vision and sequence modeling to learn temporal driving behavior.
- Achieved 87% steering-angle prediction accuracy, demonstrating Transformer-based modeling of sequential driving data, with a real-time extension targeting 30 FPS.

Trader Performance vs. Market Sentiment Dec 2025 – Feb 2026
Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn

- Investigated how market sentiment influences trader behavior and profitability by analyzing relationships between sentiment indicators and trading outcomes across 10,000+ trades.
- Cleaned and processed 15,000+ records and performed EDA, feature analysis, statistical comparisons, and sentiment-based segmentation across 15+ features using Python, Pandas, NumPy, Matplotlib, and Seaborn.
- Identified measurable behavioral patterns across sentiment regimes, including a 12% difference in returns between high- and low-sentiment periods, translating raw market data into actionable trading insights.

EXTRACURRICULAR ACTIVITIES

- Core Team Member – adVITya, VIT Bhopal: Contributed to the planning and execution of adVITya, the university's annual college fest, coordinating with student teams and organizers to ensure smooth event delivery.
