SUMMARY

Computer Science undergraduate (CGPA 9.07/10) with hands-on experience building machine learning models, data pipelines, and analytics-driven applications in Python, Java, and C++. Skilled in computer vision, NLP, and statistical analysis, with a strong foundation in data structures, databases, and performance tuning for scalable, data-intensive systems. Experienced in translating raw data into actionable insights through model building, evaluation, and visualization.

TECHNICAL SKILLS

- **Languages:** Python, Java, C++, SQL
- **Core CS:** Data Structures & Algorithms, OOP, Databases (SQL/NoSQL), Distributed Systems, Machine Learning, NLP, Computer Vision
- **Libraries/Frameworks:** OpenCV, NLTK, Pandas, NumPy, YOLO/SSD, Scikit-learn
- **Practices:** Unit & End-to-End Testing, Debugging, Real-Time & Concurrent Processing, Performance Tuning, Data Analysis & Visualization
- **Tools:** Git, Firebase, Power BI

PROJECTS

FuelSenseAI — AI-Powered Smart Fuel & EV Charging Recommendation Platform Jun 2026 – Present

- Build a Flask-based recommendation platform in Python that ranks 500+ CNG and EV charging stations by predicted queue time, travel distance, and live location.
- Design a scalable backend with REST APIs, SQLite, and Pandas; evaluate 3–5 Scikit-learn models on a 20,000+ record dataset, targeting 90%+ wait-time prediction accuracy.
- Integrate route planning, live traffic, weather, and fuel-price data into the recommendation engine to improve station-selection decisions.
- Implement interactive, map-based dashboards for real-time station comparison, search, and filtering.

Advanced Driver Assistance System (ADAS) using Computer Vision Feb 2026 – May 2026

- Built a real-time ADAS prototype processing live video at 25 FPS across concurrent lane detection, object detection, and collision-warning modules.
- Trained and integrated YOLO/SSD models on 15,000+ annotated images, achieving 93–96% detection accuracy for vehicles, pedestrians, and obstacles.
- Applied edge detection, Hough Transform, and region masking to improve lane-tracking accuracy, validated across 100+ simulated driving scenarios.
- Reduced false positives by 25–35% through model tuning and algorithmic optimization, improving pipeline speed and reliability.

Trader Sentiment Analysis using NLP & Market Data Jan 2026 – Feb 2026

- Built an end-to-end NLP pipeline (ingestion, preprocessing, tokenization, feature extraction) to analyze 30,000+ financial news articles and social media posts.
- Achieved 88–92% sentiment classification accuracy on a 25,000–50,000 article labeled dataset using NLTK, TextBlob, and VADER.
- Combined qualitative sentiment signals with quantitative market indicators, improving prediction correlation by 15–20% over baseline.
- Visualized sentiment trends via Matplotlib, Power BI, and Tableau dashboards to support data-driven decision-making.

EDUCATION

B.Tech in Computer Science — Vellore Institute of Technology, Bhopal, MP

Sep 2023 – May 2027

CGPA: 9.07 / 10

CERTIFICATIONS

- AWS Technical Essentials — AWS Training & Certification (Sep 2025)
- Introduction to Machine Learning — NPTEL, IIT Madras
- Marketing Analytics (Elite, 90%) — NPTEL, IIT Kharagpur
