EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science & Engineering, CGPA: 9.07

Bhopal, Madhya Pradesh

2023 – 2027

TECHNICAL SKILLS

Programming:	Python, SQL, Java, HTML
Data Science:	Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA), Data Preprocessing, Feature Engineering, Statistical Analysis
Machine Learning:	Scikit-learn, Regression, Classification, Decision Trees, Random Forest, SVM, KNN, Naive Bayes, Gradient Boosting, XGBoost, PCA, Clustering, Anomaly Detection
Deep Learning & AI:	TensorFlow, Computer Vision, OpenCV, Transformer Architecture, Sequence Modeling
Frameworks:	Flask, Streamlit
MLOps & Deployment:	MLflow, DagsHub, BentoML, Docker, AWS, Azure
Coding Profiles:	LeetCode – YShishodia , CodeForces – YShishodia24

EXPERIENCE

Data Science / Analytics Intern

Remote

Data Science Technologies, Gurugram, Haryana

- Analyzed, cleaned, and preprocessed large-scale structured data with Python, performing data quality checks, handling missing and inconsistent values, and identifying trends, patterns, and anomalies.
- Performed exploratory data analysis (EDA), statistical analysis, and feature engineering to transform raw business data into structured datasets for analytical and machine learning applications.
- Developed data visualizations and analytical reports using Matplotlib and Seaborn to present key trends, correlations, and performance patterns, supporting data-driven business decisions.

PROJECTS

Network Security Threat Detection

Jun 2026 – Aug 2026

Tech Stack: Python, MongoDB Atlas, Pandas, NumPy, Scikit-learn

- Built a modular ETL pipeline to extract 11,000+ network security records across 30 columns from MongoDB Atlas and transform raw records into structured, ML-ready format with Python and NumPy.
- Automated data preprocessing and train-test dataset generation across 11,000+ records, while implementing configurable logging and custom exception handling for a reproducible workflow.
- Designed the pipeline with a modular architecture spanning 30 feature columns to support subsequent data validation, transformation, and machine learning stages

FuelSense AI

Mar 2026 – May 2026

Tech Stack: Python, Machine Learning, Flask, Geoapify API, OpenStreetMap

- Addressed inefficient fuel/EV station selection by developing an AI-driven recommendation system covering 500+ stations, evaluating options using geospatial, distance, time-of-day, and traffic-related data.
- Engineered a Python-based data processing and scoring pipeline for 500+ fuel and EV stations, integrating Geoapify and OpenStreetMap APIs to process geospatial data across 1,000+ locations and support AI-based station scoring and traffic-density prediction.
- Automated ranking of the top 5 stations based on contextual factors, enabling faster, data-driven station selection through location-aware recommendations.

Trader Performance vs. Market Sentiment

Dec 2025 – Feb 2026

Tech Stack: Python, Pandas, NumPy, Matplotlib, Seaborn, Tableau

- Investigated how market sentiment influences trader behavior and profitability by analyzing relationships between sentiment indicators and trading outcomes across 10,000+ trades.
- Cleaned and processed 15,000+ records and performed EDA, feature analysis, statistical comparisons, and sentiment-based segmentation across 15+ features using Python, Pandas, NumPy, Matplotlib, and Seaborn.
- Identified measurable behavioral patterns across sentiment regimes, including a 12% difference in returns between high- and low-sentiment periods, and built an interactive tableau dashboard to translate raw market data into actionable, stakeholder-ready trading insights.

CERTIFICATIONS

- AWS Certified AI Practitioner – Amazon Web Services
